My presentation will summarize research that I have done examining Pecha Kucha in the classroom. Pecha Kucha is a fast past, visual presentation style where each slide has limited text and is presented for 20 seconds. A traditional Pecha Kucha presentation is 20 slides (6:40 presentation). I will discuss findings from 3 sets of studies that have examined such topics as, is Pecha Kucha helpful for exam review?, do students give better presentations using Pecha Kucha?, and do students remember information for Pecha Kucha or traditional PowerPoint? Some of the findings from this work have been presented at conferences and published—or the manuscript is in preparation.
